

## Experiment 7: Shift Reduce Parsing

9/3/22

### Aim:

To implement shift reduce parser using C program.

### Algorithm:

1. Start
2. Get the input expression and store it in the input buffer.
3. Read the data from the input buffer one at the time
4. Using stack and push & pop operation shift and reduce symbols with respect to production rules available.
5. Continue the process till symbol shift and production rule reduce reaches the start symbol.
6. Display the Stack Implementation table with corresponding Stack actions with input symbols.
7. Stop

### Code:

```
#include<stdio.h>
#include<string.h>
int k=0,z=0,i=0,j=0,c=0;
char a[16],ac[20],stk[15],act[10];
void check();
int main()
{
    puts("GRAMMAR is E->E+E \n E->E*E \n E->(E) \n E->id");
    puts("enter input string ");
    scanf("%s",a);
    c=strlen(a);
    strcpy(act,"SHIFT->");
    puts("stack \t input \t action");
    for(k=0,i=0; j<c; k++,i++,j++)
    {
        if(a[j]=='(' && a[j+1]!='d')
        {
            stk[i]=a[j];
            stk[i+1]=a[j+1];
            stk[i+2]='\0';
            a[j]=' ';
            a[j+1]=' ';
        }
    }
}
```

```

        printf("\n$%s\t%s$\t%sid",stk,a,act);
        check();
    }
else
    {
        stk[i]=a[j];
        stk[i+1]='\0';
        a[j]=' ';
        printf("\n$%s\t%s$\t%ssymbols",stk,a,act);
        check();
    }
}

}

void check()
{
    strcpy(ac,"REDUCE TO E");
    for(z=0; z<c; z++)
        if(stk[z]=='i' && stk[z+1]=='d')
        {
            stk[z]='E';
            stk[z+1]='\0';
            printf("\n$%s\t%s$\t%s",stk,a,ac);
            j++;
        }
    for(z=0; z<c; z++)
        if(stk[z]=='E' && stk[z+1]=='+' && stk[z+2]=='E')
        {
            stk[z]='E';
            stk[z+1]='\0';
            stk[z+2]='\0';
            printf("\n$%s\t%s$\t%s",stk,a,ac);
            i=i-2;
        }
    for(z=0; z<c; z++)
        if(stk[z]=='E' && stk[z+1]=='*' && stk[z+2]=='E')
        {
            stk[z]='E';
            stk[z+1]='\0';
            stk[z+1]='\0';
            printf("\n$%s\t%s$\t%s",stk,a,ac);
            i=i-2;
        }
    for(z=0; z<c; z++)

```

```

if(stk[z]=='(' && stk[z+1]=='E' && stk[z+2]==''))
{
    stk[z]='E';
    stk[z+1]='\0';
    stk[z+1]='\0';
    printf("\n%s\t%s\t%s",stk,a,ac);
    i=i-2;
}
}

```

### Output:

```

GRAMMAR is E->E+E
E->E*E
E->(E)
E->id
enter input string
id+id*id+id
stack    input    action

$id      +id*id+id$  SHIFT->id
$E       +id*id+id$  REDUCE TO E
$E+      id*id+id$  SHIFT->symbols
$E+id    *id+id$    SHIFT->id
$E+E     *id+id$    REDUCE TO E
$E       *id+id$    REDUCE TO E
$E*      id+id$     SHIFT->symbols
$E*id    +id$       SHIFT->id
$E*E     +id$       REDUCE TO E
$E       +id$       REDUCE TO E
$E+      id$        SHIFT->symbols
$E+id    $          SHIFT->id
$E+E     $          REDUCE TO E
$E       $          REDUCE TO E

...Program finished with exit code 0
Press ENTER to exit console.

```

### Result:

Hence Shift Reduce Parsing is done For Given Grammar.
