EXPERIMENT 15

Implement any one storage allocation strategy (heap, stack, static)

Date: 19.4.22

AIM: To implement Stack storage allocation strategies (heap, stack, static) using a C program.

ALGORITHM:

Step-1: Initially check whether the stack is empty
Step-2: Insert an element into the stack using push operation
Step-3: Insert more elements onto the stack until the stack becomes full
Step-4: Delete an element from the stack using pop operation
Step-5: Display the elements in the stack
Step-6: Stop the program by exit

Code:

```
#include<stdio.h>
#include<stdlib.h>
#define TRUE 1
```

```
#define FALSE 0
typedef struct Heap
{
int data;
